GLOBAL MATH
DEPARTMENT

Goals for This Presentation

You will learn about four different instructional strategies for teaching reasoning and communication in statistics.

1. Error Analysis
2. Peer Critique
3. Building the Model Solution
4. Stand & Talk with virtual variation of Chat Explosion

Goals for This Presentation

You will learn about four different instructional strategies for teaching reasoning and communication in statistics.

1. Error A **BONUS STRATEGY: Quickwrite**
2. Peer Critique
3. Building the Model Solution
4. Stand & Talk with virtual variation of Chat Explosion

Equity and Access

- Create a willingness in students to share in front of their peers as they learn

Equity and Access

- Create a willingness in students to share in front of their peers as they learn
- Promote verbal and written communication around statistics concepts

Equity and Access

- Create a willingness in students to share in front of their peers as they learn
- Promote verbal and written communication around statistics concepts
- Culture of collaboration where mistakes are valued as part of the learning process

Error Analysis

Description: Give students an existing solution and have them identify and describe where the errors have occurred.

Error Analysis Example 1

8. Lisa is a good free throw shooter. The basketball goes in the basket 80% of the time. She tries to make 3 free throws. (6 points)

a. What is the probability the ball goes in all 3 times? $.8 \times .8 \times .8 = 0.512$

b. What is the probability the ball misses all 3 times? $.2 \times .2 \times .2 = 0.008$

c. What is the probability she makes at least one shot in the 3 attempts?

$$.8 \times .2 \times .2 = 0.032$$

Error Analysis Example 1

8. Lisa is a good free throw shooter. The basketball goes in the basket 80% of the time. She tries to make 3 free throws. (6 points)

a. What is the probability the ball goes in all 3 times? $.8 \times .8 \times .8 = 0.512$

b. What is the probability the ball misses all 3 times? $.2 \times .2 \times .2 = 0.008$

c. What is the probability she makes at least one shot in the 3 attempts?

$$.8 \times .2 \times .2 = 0.032$$

Error Analysis Example 2

A change has been made that should improve student satisfaction with parking. Let's assume that before the change, 37% of students approve of the parking that is provided. Fifty students were randomly selected and in the sample 21 approve of the parking that is provided. Is this sufficient evidence that student satisfaction has improved over the previous satisfaction level?

$$H_0: p > 0.42$$

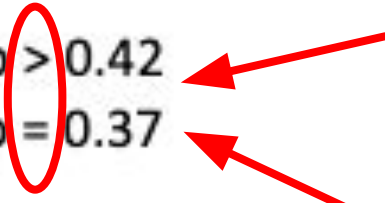

$$H_a: p = 0.37$$

The random sample condition is met because 50 students were randomly selected. The large counts or normal condition is met, because $n > 30$.

$$z = \frac{0.37 - 0.42}{\sqrt{\frac{0.37(1 - 0.37)}{50}}} = -0.732$$

Error Analysis Example 2

A change has been made that should improve student satisfaction with parking. Let's assume that before the change, 37% of students approve of the parking that is provided. Fifty students were randomly selected and in the sample 21 approve of the parking that is provided. Is this sufficient evidence that student satisfaction has improved over the previous satisfaction level?

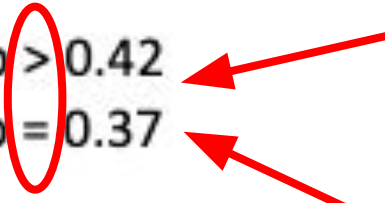

$$H_0: p > 0.42$$
$$H_a: p = 0.37$$

The random sample condition is met because 50 students were randomly selected.
The large counts or normal condition is met, because $n > 30$.

$$z = \frac{0.37 - 0.42}{\sqrt{\frac{0.37(1 - 0.37)}{50}}} = -0.732$$

Error Analysis Example 2

A change has been made that should improve student satisfaction with parking. Let's assume that before the change, 37% of students approve of the parking that is provided. Fifty students were randomly selected and in the sample 21 approve of the parking that is provided. Is this sufficient evidence that student satisfaction has improved over the previous satisfaction level?

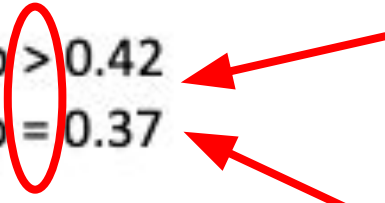

$$H_0: p > 0.42$$
$$H_a: p = 0.37$$

The random sample condition is met because 50 students were randomly selected. The large counts or normal condition is met, because $n > 30$.

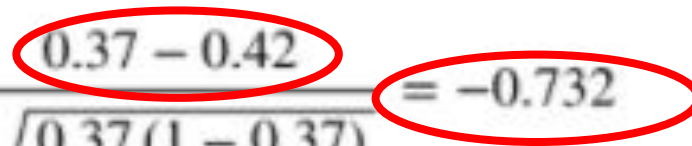

$$z = \frac{0.37 - 0.42}{\sqrt{\frac{0.37(1 - 0.37)}{50}}} = -0.732$$

Error Analysis Example 2

$$H_a: p = 0.37$$

The random sample condition is met because 50 students were randomly selected. The large counts or normal condition is met, because $n > 30$.

$$z = \frac{0.37 - 0.42}{\sqrt{\frac{0.37(1 - 0.37)}{50}}} = -0.732$$

Error Analysis

Practical Tips

1. Gather work from one year and use it for a future year

Error Analysis

Practical Tips

1. Gather work from one year and use it for a future year
2. Use sample responses from released AP Free Response Questions or your state assessment

Peer Critique

Description: Students work in pairs or small groups to critique solutions to Free Response Questions.

Compare and contrast

Comparison of Graduation Rates

Compare and contrast

Half of the colleges have a center above 70% and the other half have a center below 70%. 4 of them have a min that is below 60%, but all six have a max of 70%. The two outliers are A's min and F's max.

Criteria	Evidence
Center	
Spread	
Outliers	
Context	
Other Comments	

Peer Critique

Practical Tips

1. Large class critique first. Focus on the work and not the student. Scan solutions and remove names.

Peer Critique

Practical Tips

1. Large class critique first. Focus on the work and not the student. Scan solutions and remove names.
2. Give students criteria to help with the critique.

Peer Critique

Practical Tips

1. Large class critique first. Focus on the work and not the student. Scan solutions and remove names.
2. Give students criteria to help with the critique.
3. Have all students answer the same prompt and then share with two others for feedback.

Build the Model Solution

Description: Students work in pairs or groups to assemble a sentence to represent a model solution to a FRQ. Approximate time 5-10 minutes.

Build the Model Solution

Description: Students work in pairs or groups to assemble a sentence to represent a model solution to a FRQ. Approximate time 5-10 minutes.

- 1) Find a model solution from an AP Free Response question or state assessment.

Build the Model Solution

Description: Students work in pairs or groups to assemble a sentence to represent a model solution to a FRQ. Approximate time 5-10 minutes.

- 1) Find a model solution from an AP Free Response question or state assessment.
- 2) Split it into pieces of 4-5 words in length.

Build the Model Solution

3) Create 4-5 additional pieces that could be used in place of some of the pieces. This could be based on common student errors, like using mean instead of median or sample instead of population.

Build the Model Solution

- 3) Create 4-5 additional pieces that could be used in place of some of the pieces. This could be based on common student errors, like using mean instead of median or sample instead of population.
- 4) Put the words from step 2 and step 3 on separate cards or pieces of paper.

Build the Model Solution

- 3) Create 4-5 additional pieces that could be used in place of some of the pieces. This could be based on common student errors, like using mean instead of median or sample instead of population.
- 4) Put the words from step 2 and step 3 on separate cards or pieces of paper.
- 5) Give the students the prompt and the pieces of paper. You may wish to tell them how many “extra” pieces there are that are not part of the solution.

Build the Model Solution Example 1

Fiddle Lake is stocked with fish in the winter for fishing. It is safe to assume that the weights of the fish are approximately normally distributed with a mean length of 7 inches and a standard deviation of 0.5 inches. A random sample of 50 fish was caught and the probability that the sample mean was less than 6.5 inches was calculated.

It is safe to assume that the weights of the fish are approximately normally distributed with a mean length of 7 inches and a standard deviation of 0.5 inches. A random sample of 50 fish was caught and the probability that the sample mean was less than 6.5 inches was calculated.

If the population distribution was nonnormal, would it still be appropriate to use the normal distribution to compute the probability?

of the sample proportion

it would be appropriate
to use

Since the sample size

as the sample size n
increases.

will become
approximately normal

Yes. The Law of Large
Numbers

says that the sampling
distribution

is greater than 10

is reasonably large
($n=50$),

even though the
population is nonnormal.

of the sample mean

will become exactly
normal

Yes. The Central Limit
Theorem

the normal
distribution to find the
probability of interest

Since the population

of the sample proportion

says that the sampling distribution

of the sample mean

it would be appropriate to use

is greater than 10

will become exactly normal

Yes. The Central Limit Theorem

Since the sample size

is reasonably large ($n=50$),

Build the Model Solution Variation

Have a full model solution, but leave 3 or 4 blanks for students to complete or give them options for what might go in the blanks.

Build the Model Solution Variation

Have a full model solution, but leave 3 or 4 blanks for students to complete or give them options for what might go in the blanks.

Example: The slope of the LSRL is _____. This means that for each additional _____ in height the number of steps to get from the library to the gym is predicted to _____ by _____

$$\hat{y} = 5.2 - 2.3x$$

x is the height in centimeters, y-hat is the predicted number of steps

Stand and Talk

Description: A quick way for students to think about a prompt and then talk about a prompt.

Concept created by: Sara VanDerWerf

Stand and Talk

Tip #1 – No trios or opting out!

Stand and Talk

Tip #1 – No trios or opting out!

Tip #2 – 30 seconds or more individual think time first.

Stand and Talk

Tip #1 – No trios or opting out!

Tip #2 – 30 seconds or more individual think time first.

Tip #3 – Display the prompt in the front of the room.

Stand and Talk

Tip #1 – No trios or opting out!

Tip #2 – 30 seconds or more individual think time first.

Tip #3 – Display the prompt in the front of the room.

Tip #4 – Not recommended as a class opener.

Stand and Talk

Tip #1 – No trios or opting out!

Tip #2 – 30 seconds or more individual think time first.

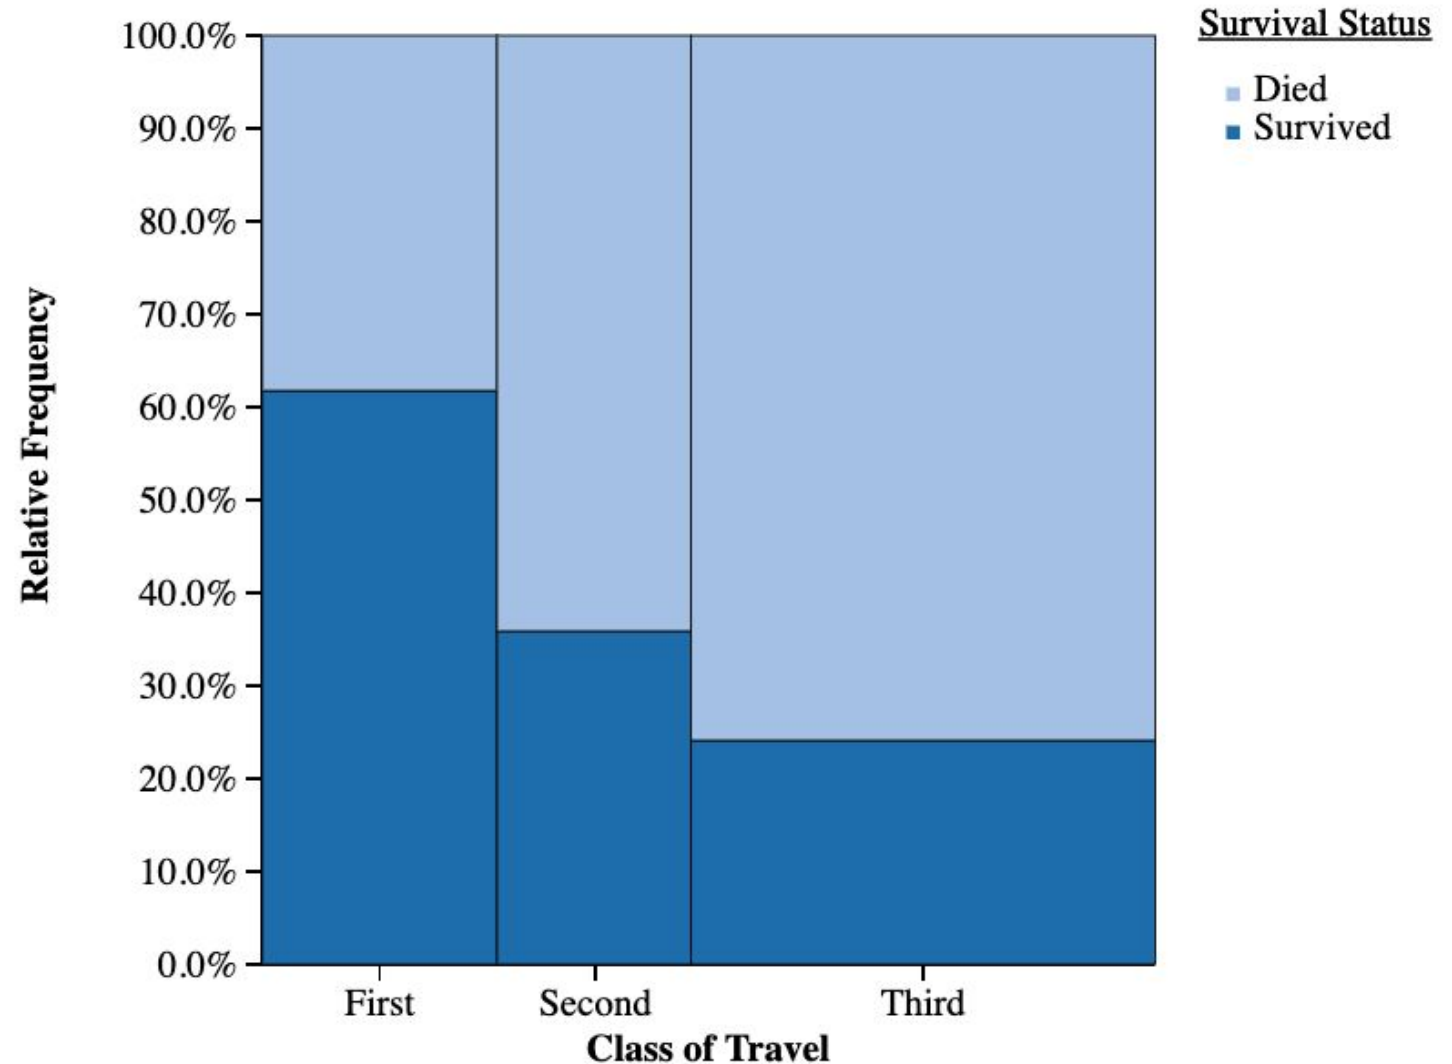

Tip #3 – Display the prompt in the front of the room.

Tip #4 – Not recommended as a class opener.

Tip #5 – Keep the momentum – stand and debrief.

Stand and Talk Example 1

What story does this graph tell about the people who were on the Titanic?

Stand and Talk Example 2

placebo

placebo effect

double blind

single blind

random assignment

control

blocking

SRS

strata

cluster

bias

nonresponse

convenience sample

voluntary response

matched pairs

Chat Explosion (a.k.a “Waterfall”)

Description: A quick way for all students to have an opportunity to think, write and share.

Chat Explosion (a.k.a “Waterfall”)

Description: A quick way for all students to have an opportunity to think, write and share.

A good alternative to the stand and talk...however, there is no sharing with a partner prior to typing in the chat.

Chat Explosion Steps

Step #1 – Announce “This is a chat explosion.”

Chat Explosion Steps

Step #1 – Announce “This is a chat explosion.”

Step #2 – Allow adequate thinking/typing time.

Chat Explosion Steps

Step #1 – Announce “This is a chat explosion.”

Step #2 – Allow adequate thinking/typing time.

Step #3 – Embrace the silence. Don't talk.

Chat Explosion Steps

Step #1 – Announce “This is a chat explosion.”

Step #2 – Allow adequate thinking/typing time.

Step #3 – Embrace the silence. Don't talk.

Step #4 – Let the chat explode!

Chat Explosion Steps

Step #1 – Announce “This is a chat explosion.”

Step #2 – Allow adequate thinking/typing time.

Step #3 – Embrace the silence. Don’t talk.

Step #4 – Let the chat explode!

Step #5 – Summarize what you see.

Chat Explosion Example 2

What do you notice?

What do you wonder?

Bonus Strategy: Quickwrite

Description: Students write for a short, specific amount of time about a designated topic.

Bonus Strategy: Quickwrite

Description: Students write for a short, specific amount of time about a designated topic.

Special Side Note: You do not need to provide feedback on everything they do.

Bonus Strategy: Quickwrite

Which of the following would provide you with more evidence that a coin is not a fair coin?

6 heads in 10 flips OR 8 heads in 10 flips

Bonus Strategy: Quickwrite

Which of the following would provide you with more evidence that a coin is not a fair coin?

6 heads in 10 flips OR 8 heads in 10 flips

Which of the following would provide you with more evidence that a coin is not a fair coin?

8 heads in 10 flips OR 80 heads in 100 flips

Final Thoughts

- Encourage writing

Final Thoughts

- Encourage writing
- Give sufficient time for thinking

Final Thoughts

- Encourage writing
- Give sufficient time for thinking
- Let students talk

Final Thoughts

- Encourage writing
- Give sufficient time for thinking
- Let students talk
- Value mistakes as part of learning
